-- Get the Code ▼

Get the Code

[Home](#) → Get the Code

In the “Home Page Before Content” Widget Area a “Text” widget was used. Leave the Title field blank:

[Home Page Before Content \(Click here to grab the code behind this layout\)](#)

For the rest of page examples, below are the corresponding content area source code used with a “Text” widget:

[Home Page 1 Example \(Click here to grab the code behind this layout\)](#)

[Home Page 2 Example \(Click here to grab the code behind this layout\)](#)

[Home Page 3 Example \(Click here to grab the code behind this layout\)](#)

[Home Page 4 Example \(Click here to grab the code behind this layout\)](#)

[Home Page 5 Example \(Click here to grab the code behind this layout\)](#)

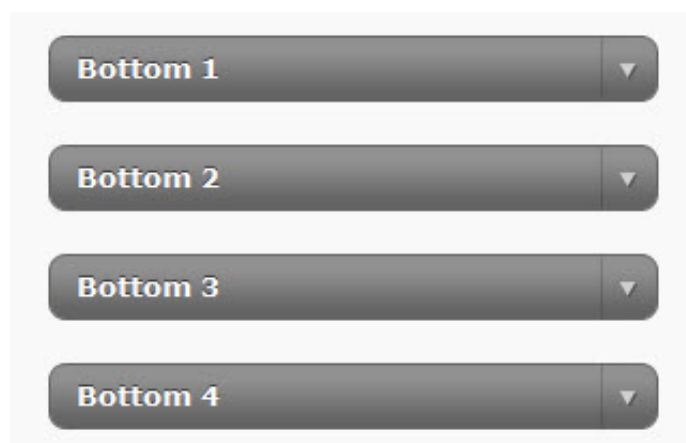

[Home Page 6 Example \(Click here to grab the code behind this layout\)](#)

[Home Page 7 Example \(Click here to grab the code behind this layout\)](#)

The shortcode based column layout described above is only one way of implementing columns on the home page. Feel free to experiment with all Home page widget areas, for example you can use Widget areas alone to create one, two, three or four column layouts.
